

Data types

Built-in Data Types

In Python, data types take form of objects-either built-in objects or objects created by programmers.

- ❑ Built-in objects make program easy to write.
- ❑ Built-in objects are components of extensions.
- ❑ Built-in objects are a standard part of the language.
- ❑ Built-in objects are more efficient than custom data structures.

Various Data Types

☐ Number

☐ Dictionary

☐ String

☐ Tuple

☐ List

☐ Sets
